Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election /Restriction

1. Applicant's election without traverse of Group IV Figures 16-24 and readable on claims 1, 7, and 10-20 in the reply filed on December 21, 2005 is acknowledged.

Specification

2. The disclosure is objected to because of the following informalities: On page 29 line 26 "the first frame member 302" should be --the second frame member 304--.
- Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1, 7, and 10-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Reinhardt (DE 3739272).

Reinhardt discloses an electric actuator comprising a driving force-transmitting belt for transmitting rotary driving force of a rotary driving source to a slider, and a tension-adjusting mechanism for adjusting tension of said driving force-transmitting belt, said tension-adjusting mechanism comprising: a first member (9) to which one end of said driving force-transmitting belt (19) is connected; a second member (8) to which another end of said driving force-transmitting belt is connected and which is provided displaceably in an axial direction with respect to said first member (see Fig 1); an

adjusting member(11, spring arm) which adjusts a distance between said first member and said second member; and an elastic member (unnumbered spring, see Fig 1) which is provided between said adjusting member and said first member or between said adjusting member and said second member (see Fig 1), wherein said first member is fixed on said slider (see Fig 1), and an axis of said adjusting member is disposed within a cross section of said driving force-transmitting belt perpendicular to said axis (see Fig 1).

Re claims 10 and 17, the method of making is not germane to the patentability of the device itself.

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
